

Hello there! Welcome to this exciting new journey of creating video games!

Isn't it beautiful to imagine that video games allow you to create the world like you always wanted it to be? So today, we are going to learn this amazing art of creating really interactive computer applications called video games with a little exercise. You must be really really excited to know that you also will be able to make your own 3D games like Monument Valley 2, Ori and the Blind Forest, Pokemon Go and what not! In this course, we are going to learn about a computer software called the Unity Engine, which is a game engine.

Did you know that all of these games were made with Unity?

Over the period of our course we are going to learn to use unity to recreate our destroyed planet with elements such as trees, water, buildings, roads, candies and everything we need to stay alive!

We will have to redesign our own planet in such a way, it can support life again!

In the end, our players have to find out the 5 elements of nature that are essential to life on our planet.

So let us put our minds together and dive into the world of video game development with the Unity Engine.
